Recommendations

Generated by fixed, rule-based checks against this scan's results — not an AI model.

[HIGH] Fix duplicate page titles

8 duplicate title(s) detected across the site. Search engines may struggle to differentiate pages with identical titles — give each page a unique one.

[HIGH] Add missing meta descriptions

9 of 9 pages (100.0%) have no meta description. This is often the snippet shown under your result in search listings.

[HIGH] Add ALT text to images

11 of 11 images (100.0%) are missing ALT text. ALT text helps accessibility and lets search engines understand image content.

[HIGH] Fix broken links

6 broken link(s) were detected across the scanned pages. Broken links hurt user experience and waste crawl budget.

[HIGH] Create a sitemap.xml

No sitemap.xml was found at the site root. A sitemap helps search engines discover and crawl your pages more efficiently.

[MEDIUM] Improve slow-loading pages

4 page(s) took over 1.5s to respond. Slower pages tend to have higher bounce rates and can be down-ranked.

[LOW] Add canonical tags

9 page(s) have no canonical URL declared. Canonical tags help prevent duplicate-content issues, especially for pages reachable via multiple URLs.

[LOW] Expand thin content

5 page(s) have fewer than 300 words of visible text. Thin pages tend to rank worse — consider expanding the content or consolidating with a related page.

[LOW] Declare page language

9 page(s) are missing the <html lang="..."> attribute, which helps search engines serve the page to the right regional audience.

[LOW] Add structured data (schema.org)

None of the scanned pages include structured data (JSON-LD or microdata). Structured data can unlock rich results such as star ratings, breadcrumbs, or FAQ snippets.

[LOW] Add Twitter Card tags

No Twitter Card meta tags were found. Adding them improves how links appear when shared on X/Twitter.

[LOW] Set explicit image dimensions

11 image(s) have no width/height attributes, which can cause layout shift while the page loads. Set explicit dimensions on <img> tags.

[LOW] Reference your sitemap in robots.txt

robots.txt exists but doesn't reference a sitemap. Adding a "Sitemap:" line helps crawlers find it automatically.

Page Findings Summary

URL	Status	Title	Words	Issues
https://pwn.college/welcome	200	pwn.college	316	6
https://pwn.college/register	200	pwn.college	221	8
