LOW	Thin content	https://www.amazon.in/
LOW	Missing declared language	https://www.amazon.in/
LOW	robots.txt doesn't reference sitemap	Site-wide
INFO	No structured data	https://www.amazon.in/
INFO	Missing Open Graph tags	https://www.amazon.in/
INFO	Missing Twitter Card tags	https://www.amazon.in/

Recommendations

Generated by fixed, rule-based checks against this scan's results — not an AI model.

[HIGH] Add missing page titles

1 of 1 pages (100.0%) have no <title> tag. Every indexable page should have a unique, descriptive title.

[HIGH] Add missing meta descriptions

1 of 1 pages (100.0%) have no meta description. This is often the snippet shown under your result in search listings.

[HIGH] Add a primary heading (H1)

1 page(s) have no H1 tag. The H1 tells both users and search engines the main topic of the page.

[HIGH] Create a sitemap.xml

No sitemap.xml was found at the site root. A sitemap helps search engines discover and crawl your pages more efficiently.

[LOW] Add canonical tags

1 page(s) have no canonical URL declared. Canonical tags help prevent duplicate-content issues, especially for pages reachable via multiple URLs.

[LOW] Expand thin content

1 page(s) have fewer than 300 words of visible text. Thin pages tend to rank worse — consider expanding the content or consolidating with a related page.

[LOW] Declare page language

1 page(s) are missing the <html lang="..."> attribute, which helps search engines serve the page to the right regional audience.

[LOW] Add structured data (schema.org)

None of the scanned pages include structured data (JSON-LD or microdata). Structured data can unlock rich results such as star ratings, breadcrumbs, or FAQ snippets.

[LOW] Add Open Graph tags

No Open Graph tags (og:title, og:description, og:image) were found. These control how your pages look when shared on social platforms.

[LOW] Add Twitter Card tags

No Twitter Card meta tags were found. Adding them improves how links appear when shared on X/Twitter.

[LOW] Reference your sitemap in robots.txt

robots.txt exists but doesn't reference a sitemap. Adding a "Sitemap:" line helps crawlers find it automatically.

Page Findings Summary
