Recommendations

Generated by fixed, rule-based checks against this scan's results — not an AI model.

[HIGH] Fix broken links

42 broken link(s) were detected across the scanned pages. Broken links hurt user experience and waste crawl budget.

[HIGH] Create a sitemap.xml

No sitemap.xml was found at the site root. A sitemap helps search engines discover and crawl your pages more efficiently.

[MEDIUM] Adjust title length

1 page(s) have a title outside the recommended 10–60 character range. Titles that are too short lack context; titles that are too long get truncated in search results.

[LOW] Add Twitter Card tags

No Twitter Card meta tags were found. Adding them improves how links appear when shared on X/Twitter.

[LOW] Set explicit image dimensions

3 image(s) have no width/height attributes, which can cause layout shift while the page loads. Set explicit dimensions on <img> tags.

[LOW] Reference your sitemap in robots.txt

robots.txt exists but doesn't reference a sitemap. Adding a "Sitemap:" line helps crawlers find it automatically.

Page Findings Summary

URL	Status	Title	Words	Issues
https://www.whois.com/	200	Whois.com - Domain Names & Identity	525	3
https://www.whois.com/about	200	About Us | Whois.com	851	5
